PRINT QUALITY

ApeosPro for Photo Firmware Fine-tuned for Photography

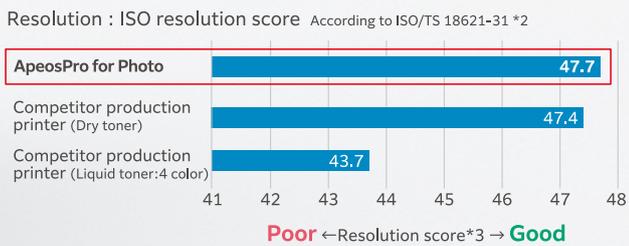

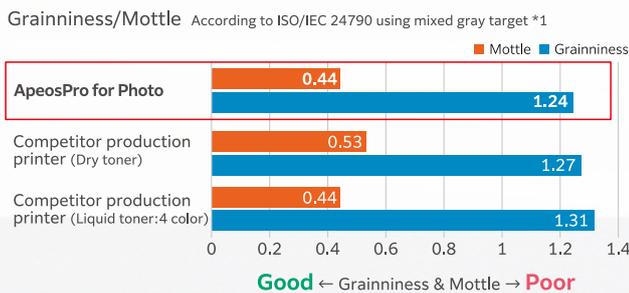

ApeosPro for Photo has achieved the optimum print quality for photo applications through special image processing that smoothly reproduces skin tone. The high image quality of ApeosPro for Photo

“World’s first” high resolution LED printhead print output

Latest technology to achieve professional quality images and high-definition printing.

- World’s first* LED printhead with 2400 dpi resolution
- Vibrant colors and smooth gradation thanks to the minute toner particles of the Super EA Eco toner
- Crisp reproduction of images with fine lines and tiny text

* Dry-type electrophotographic method. According to our research as of March 2021

1 Gray patch of CIELAB L=60 was measured.

*2 Procedure for “Process colour evaluation” was applied. Test pattern “ISO_ConRes20_sRGB” defined in ISO/TS 18621-31 was printed and measured.

*3 Score 100 is ideal reproduction.

Maintain print quality with easy adjustment

Use inbuilt standard SIQA* to easily & quickly adjust the print quality.

- Simply scan the dedicated charts to automatically calculate the appropriate adjustment values for both Side 1 & 2 Registration, Density Uniformity Adjustment, and Adjust Image Transfer

* Simple Image Quality Adjustment

VERSATILITY

The ApeosPro for Photo’s exceptional paper-handling capacity means this system can cater to a diverse range of applications.

- Supporting various paper stock to cover the wide range of applications including photo albums, photo prints.
- It supports a wide range of paper sizes, from minimum size of 100.0 mm × 148.0 mm to long paper 330.2 mm × 1300.0 mm.
- By adjusting the force applied to the paper according to the paper thickness, stable paper feed is performed even with cardstock paper, and high registration accuracy is achieved.
- The optimum output conditions for each type of paper, Such as transfer conditions, can be registered (maximum: 100) so that high-quality output can be achieved efficiently simply by selecting the paper type.
- Free from volatile solvent for excellent safety and environmental performance.
- By realizing speedy calibration with the scanner built into the printer, it contributes not only to maintaining print quality but also to improving the operating rate of the printer. These functions greatly reduces the load on the photo lab users.

GP Controller

<High productivity>

- Heavy duty RIP function with high-speed processing for high-quality or variable data print jobs
- Equipped as a standard with the RIP accelerator board that produces high speed performance beyond the physical specifications of the server
- High speed serial transmission technology enables high speed job transfer to multifunction devices

<Multifunction>

- Easy operation with drag & drop of jobs during preview tasks like imposition or merging

GP Controller D01

- A monitor, keyboard and mouse are required.
- Images are for illustration purposes only. Actual product may change.

Can create the variety of high-quality value-added photo products in photo labs

Beautiful post-processing output with in-line finishing options

From printing to post-processing, you can do it all at once.

- Beautifully designed full page photo booklets with full bleed trim
- High-quality booklet with a square back finish for a flat book spine
- Crease* function to create unique accordion fold for promotional materials
- Insert oversized A3 size paper as covers
- Supports frequently used office functions—Punch, Side Stitch, Saddle Staple, and Single Fold

Note: Optional. See page 9 for details on the output options and postprocessing.

* Up to five creases can be made for mountain fold and valley fold. Folding is performed manually.

Print beautifully on various types of paper

Supports the various characteristics of paper, enabling high-precision output.

- The sensor detects misalignment of paper traveling at high speed and automatically corrects it
- By adjusting the force applied to the paper according to the paper thickness, stable paper feed is performed even with cardstock paper, and high registration accuracy is achieved
- Built-in decurler flattens paper curl and stabilises paper feed
- While viewing the amount of curl on paper, curl adjustments can be performed in real time*
- The optimum output conditions for each type of paper, such as transfer conditions, can be registered (maximum: 100) so that high-quality output can be achieved efficiently simply by selecting the paper type

* Optional.
